PROFESSIONAL SUMMARY

Software Engineer building mobile applications that ship to production and reach real users. Independently took 4 different Flutter-based apps from idea to store; Formetric launched on both the App Store and Google Play. Deep experience in scalable architecture withGetX and MVVM/Onion Architecture, and in performance-critical problems such as real-time computer vision with Google ML Kit (26-28 FPS) and camera-based signal processing (FFT, Kalman filtering, ± 3.2 BPM accuracy). Won 1st place by a wide margin in a 2-day hackathon, proving how fast a production-ready mobile app can be built from scratch; manages the full product lifecycle end-to-end, from store distribution to CI/CD pipelines.

KEY ACHIEVEMENT

- GenAI Hackathon Winner (1st Place, by a Wide Margin): Built a production-ready mobile app (Formetric) from scratch within a 2-day window, finishing well ahead of the competition; the app later launched on the App Store and Google Play.

TECHNICAL SKILLS

- Mobile Development: Flutter (Dart), GetX, MVVM / Onion Architecture, cross-platform iOS & Android, App Store & Google Play distribution
- Computer Vision & Signal Processing: Google ML Kit (Pose Detection), real-time image processing, camera-based PPG, FFT, Kalman filtering
- Backend, Data & Tools: Supabase, Firebase, PostgreSQL, NoSQL, offline sync, on-device ML, Git/GitHub, Docker, CI/CD, Postman, .NET Entity Framework Core
- Programming: Dart, Python, JavaScript, C, Java, C#
- AI-Assisted Development: Multiplying productivity with Claude, Antigravity, and MCP tools — actively using AI to shorten the path from prototype to production
- Languages: Turkish (Native), English (B1 - Intermediate)[<https://cert.efset.org/tr/MNAJbL>]

CORE PROJECTS

Formetric | *AI-Powered Fitness & Posture Analysis — Shipped to App Store & Google Play*

- A cross-platform fitness app requiring no wearable hardware; built and won 1st place by a wide margin in a 2-day GenAI Hackathon, launched on both the App Store and Google Play.
- Real-time 33-point body detection (26-28 FPS) using Google ML Kit's MediaPipe Pose model.
- Camera-based Photoplethysmography (PPG) with FFT and Kalman filtering for ± 3.2 BPM heart-rate accuracy.
- Built an on-device ML processing architecture for data privacy, zero-latency feedback, and low battery consumption.

Berbery & Glow | *Barber & Salon Ecosystem — 2 Separate Apps, Closed Beta*

- Designed a two-sided platform architecture spanning two separate mobile apps — one for barbers/salons and one for customers — covering appointment management and business-customer matching; currently in closed beta with 20 active users, launching soon.

StarAura | *Tarot, Star Chart & Dream Interpretation App*

- Independently managed the entire process from concept to architecture, UI design, and release, validating the concept with 100+ user surveys and accelerating development with AI-assisted workflows.

Merge Cafe | *Mobile Casual Game*

- A merge/casual game playable on mobile platforms; built the game mechanics, visual assets, and level design end-to-end.

Petty | *Pet Health Management*

- A modular mobile app with a pixel-perfect, responsive UI, built on Supabase; its architecture and business logic were optimized with AI-assisted tools to speed up development.

EXPERIENCE

Musoftware — Founder & Lead Software Engineer | Nov 2025 – Jun 2026

- Managed Formetric's end-to-end product lifecycle: from architectural design and performance-critical ML integration to App Store and Google Play distribution.
- Founded the business, led market-fit analysis, and implemented CI/CD pipelines for continuous mobile app updates.
- Coordinated multi-disciplinary mobile development workflows; maintained high performance and user-centric design principles.

Refons Technology — Junior Flutter Developer | 07/2025 – 09/2025

- Optimized offline data synchronization and local storage on a live production project, improving reliability for the entire user base.
- Worked in Agile cycles; performed code reviews to maintain a high-quality modular architecture.
- Took over and advanced a field application for AKEDAŞ (a state-affiliated energy distribution company) field employees, delivered through subcontractor Ersan, within 2 weeks — handling C# API integration to extend the project's functionality.

Denizbank — Intern | 11/2022 – 01/2023

- Gained experience in large-scale data management and secure communication protocols.

EDUCATION

Adana Alparslan Türkeş University of Science and Technology | 2021 – 2026

- B.Sc. in Software Engineering — GPA: 3.33 / 4.00
