Open to relocation — EU work authorization / visa sponsorship welcome

PROFESSIONAL SUMMARY

Flutter developer who ships to production, not just to a portfolio. Independently took 4 Flutter apps from idea to store, with Formetric live on both the App Store and Google Play. Deep expertise in scalable cross-platform architecture (GetX, MVVM/Onion Architecture) and performance-critical mobile engineering — real-time computer vision with Google ML Kit (26–28 FPS) and camera-based signal processing (FFT, Kalman filtering, ±3.2 BPM accuracy). Built Formetric from scratch and won 1st place by a wide margin in a 2-day GenAI hackathon, then secured investment and founded a company to bring it to market. Comfortable owning the full product lifecycle — architecture, CI/CD, store distribution, and cross-functional collaboration with UX/UI and backend teams.

TECHNICAL SKILLS

- **Mobile Development:** Flutter (Dart), GetX, Riverpod, MVVM / Onion Architecture, cross-platform iOS & Android, App Store & Google Play distribution
- **Computer Vision & Signal Processing:** Google ML Kit (Pose Detection), real-time image processing, camera-based PPG, FFT, Kalman filtering
- **Backend, Data & Tools:** REST/JSON/HTTP, Supabase, Firebase, PostgreSQL, NoSQL, offline sync, on-device ML, Git/GitHub, Docker, CI/CD, Postman, .NET Entity Framework Core
- **Programming Languages:** Dart, Python, JavaScript, C, Java, C#
- **AI-Assisted Development:** Multiplying productivity with Claude, Antigravity, and MCP tools — using AI to shorten the path from prototype to production
- **Languages:** Turkish (Native), English (B2 — Upper Intermediate, EF SET certified)

CORE PROJECTS

Formetric — AI-Powered Fitness & Posture Analysis — Shipped to App Store & Google Play

- Cross-platform fitness app requiring no wearable hardware; built and won 1st place by a wide margin in a 2-day GenAI Hackathon, then launched on both the App Store and Google Play.
- Real-time 33-point body detection (26–28 FPS) using Google ML Kit's MediaPipe Pose model.
- Camera-based Photoplethysmography (PPG) with FFT and Kalman filtering for ±3.2 BPM heart-rate accuracy.
- Built an on-device ML processing architecture for data privacy, zero-latency feedback, and low battery consumption.

Berbery & Glow — Barber & Salon Ecosystem — 2 Separate Apps, Closed Beta

- Designed a two-sided platform architecture spanning two separate mobile apps — one for barbers/salons, one for customers — covering appointment management and business-customer matching; currently in closed beta with 20 active users.

Petty — Pet Health Management

- Modular mobile app with a pixel-perfect, responsive UI, built on Supabase; architecture and business logic optimized with AI-assisted tools to speed up development.

EncryptEd — AES/RSA Cross-Platform Cryptography Utility

- Built the cryptography app underlying the research paper "How Mathematics Works in Cryptography," which won Grand Prix among 29 entries at the 61st BSUIR Scientific Conference (Belarusian State University of Informatics and Radioelectronics); award credited to research author Liubov Matusevich.

EXPERIENCE

Flutter Developer — Berry Games

Sep 2025 – Jun 2026

- Contributed as Flutter developer to a live mobile puzzle games catalog (4 titles: Berry Mahjong, Snaptiles, Berry Sudoku, Berry Block) published on the App Store and Google Play.
- Supported release management across both storefronts and conducted analytics reviews to monitor live performance and inform product decisions.

- Supported AI-assisted product development workflows to accelerate feature iteration.

Founder & Lead Software Engineer — Musoftware (part-time, concurrent with Berry Games)
Nov 2025 – Jun 2026

- Independently built Formetric from scratch and won 1st place by a wide margin in a 2-day GenAI Hackathon; secured investment on the strength of the result and founded Musoftware to take the product to market.
- Owned Formetric's end-to-end product lifecycle post-investment: architectural design, performance-critical ML integration, and App Store / Google Play distribution.
- Led market-fit analysis and implemented CI/CD pipelines for continuous mobile app updates.

Junior Flutter Developer — Refons Technology
Jul 2025 – Sep 2025

- Optimized offline data synchronization and local storage on a live production project, improving reliability for the entire user base.
- Worked in Agile cycles; performed code reviews to maintain a high-quality, modular architecture.
- Took over and advanced a field application for AKEDAŞ (a state-affiliated energy distribution company) field employees, delivered through subcontractor Ersa, within 2 weeks — handling C# API integration to extend the project's functionality.

Intern — DenizBank
Nov 2022 – Jan 2023

- Gained experience in large-scale data management and secure communication protocols.

EDUCATION

B.Sc. in Software Engineering — Adana Alparslan Türkeş University of Science and Technology
2021 – 2026

- GPA: 3.33 / 4.00

HONORS & AWARDS

1st Place Winner — Formetric GenAI Hackathon

- Won 1st place by a wide margin in an intensive 2-day GenAI Hackathon, architecting and building Formetric end-to-end.
